Human Resource Management

The IMIG International Management & Innovation Group AG is a successful internationally operating consulting company, focusing on logistics, production, production systems, innovation systems, management systems and human resource management. Furthermore IMIG and its subsidiaries IM-TEC GmbH and GIC mbh provide additional solutions for rapid prototyping (IM-TEC) and software (GIC).

Consulting by IMIG means...

- creative ideas
- efficient design of concepts
- consequent implementation

as well as...

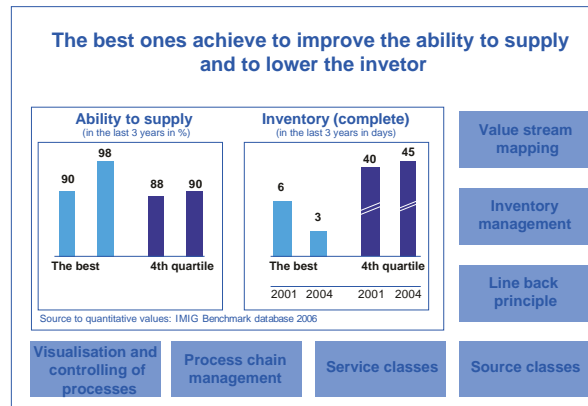

- holistic approach
- customized solutions and
- involvement of all relevant people!

IMIG provides long-time experiences of structuring and improving of business processes. Thereby it concerns the identification and the development of potentials for profitable growth as well as the conception and implementation of optimized workflows and structures for processes of logistics, production, innovation, management and human resource.

Being represented in Germany (Leonberg, Barleben and Lich), USA (Huntersville), Mexico (Ciudad Juárez), China (Shanghai) and Japan (Tokyo), the IMIG Group provides an international network enabling customers to access its consulting service anytime.

“You’d better be running - the best ones don’t wait..!”

For industrial companies the agreement of apparently opposed aims becomes more and more important. The consistent orientation of the logistics and the supply chain on the customers’ needs next to the securing of slight and stable processes at the same time is an important factor of success in order to increase sustainable competitiveness.

Orientation on effectiveness and efficiency

The aims in terms of the logistics topics accompanied by us are divided into aims of effectiveness and aims of efficiency. The aims of effectiveness - “Do the right things!” - assure the improvement of the customer satisfaction. The aims of efficiency “Do the things right!” is to reduce the effort.

Examples of aims of effectiveness:

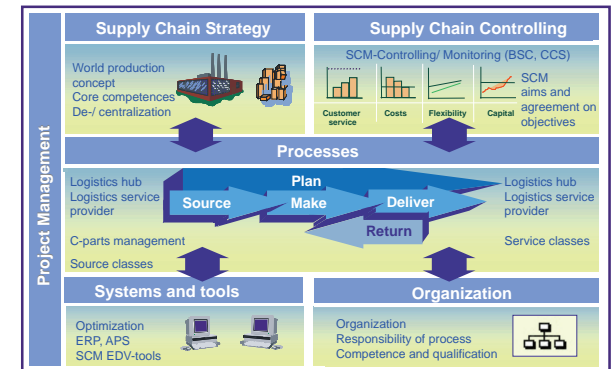

- Improvement of ability to supply and adherence to delivery dates
- Reduction of delivery time
- Improvement of material availability

Examples for aims of efficiency:

- Reduction of processing times
- Securing of minimal/ optimal inventories
- Reduction of logistics costs

Holistic approach - focusing on the complete optimum

Qualification to 100% ability to supply by **the integral observation of the complete supply chain** taking into consideration strategy, controlling, IT tools and other tools as well as organization. This way you reach a complete optimum with a clear configuration frame for every participant in the process. The **consistent improvement process** is established on this basis.

Our approach

We offer a modular consulting approach - from coaching and workshops up to extensive support of projects according to the mountain guide principle. This way the customer is quickly guided to the peak of the agreed aims. Lasting success in stages is guaranteed.

„IMIG - the perfect partner for perfect logistics!”
